Createspace Independent Publishing Platform, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.A practical guide for beginners and intermediate persons to learn, install, configure and build applications using the Cordova framework. This framework allows developers to craft applications for mobile and desktop environments. Mobile platforms can be Android, IOS, Windows Phone, Other Windows Mobile, Amazon Fire, FireFox OS, Chrome, Blackberry, etc. Desktop platforms shown here include Linux and Windows but applications will run on MAC as well if the developer desires. Desktop applications covered can be developed with Visual Studio using UWP but coverage is focused on the Electron Framework for Windows, Linux and MAC and specifically for hybrid web-based applications. A web developer in particular can easily port his or her skills to Cordova and successfully build an application, with a single code-base, on all the platforms listed above. This book shows the beginner which tools are used, which are the best, how to locate, download and install these tools, how to configure the tools for running and debugging applications on devices and emulators and finally, how to sign and deploy these applications to application stores. A Google Android release, which typically has the most steps, is covered in detail. In addition to this, developers and prospective developers get a tutorial on the GIT version control system and the SmartGit application as well as a tutorial on Visual Studio Code. Instructions are provided for Windows and Linux with references for MAC. Resources are added so that developers can learn HTML, JAVA, CSS, JavaScript, TypeScript and other technologies easily and at their leisure. We are also providing a fully-functional Lap Timer application as a means of illustrating building a professional application from scratch. This application fully illustrates the following concepts: > Design and development...
