Not illustrated. 1875 Excerpt: .synopsis of the temperature taken is given in the following scale: December 1, P.m. Temp. 104-2! December 3, P.m. Temp. 102-4 2, A.m. 101-2 1 4, A.m. 101 P.m. 102-6 P.m. 101-4 3, A.m. 101-! Post-mortem examination. The body was well nourished. At the umbilicus was the opening of a fistula leading into the small intestine. There were a few pleural adhesions posteriorly on the left side of the chest. The right pleura was natural. The base of the right lung was congested; the lungs were otherwise natural. The heart was natural. The peritoneum was everywhere thickened, and many of the coils of the intestine were firmly adherent; the membrane, moreover, was coated with recent lymph. In the left iliac fossa was a collection of creamy pus, confined to that situation by peritoneal adhesions; in the right hypochondrimn was a fsecal abscess, communicating by a rugged...

Reviews

This is the finest book i have got study till now. It usually does not price a lot of. I found out this publication from my i and dad encouraged this book to understand.

-- **Jamil Collins**

Absolutely among the best book I have possibly go through. I have go through and that i am certain that i am going to gonna read through once again again in the future. I am just delighted to tell you that this is basically the finest book i have got go through within my personal existence and could be he finest book for ever.
