GRIN Verlag. Paperback. Condition: New. 64 pages. Dimensions: 8.3in. x 5.8in. x 0.1in. Scholarly Research Paper from the year 2009 in the subject Economics - Macro-economics, general, grade: 2, 3, Humboldt-University of Berlin (Wirtschaftstheorie II (Makro)), course: Arbeitsmarktkonomik, language: English, abstract: The standard search and matching model (D. Mortensen and C. Pissarides, 1994; Pissarides, 2000) has been recently challenged by many economists. The Mortensen-Pissarides (1994) model in general says that it takes time to match jobs and workers, which causes unemployment as an outcome of market frictions. The volatility of unemployment fluctuations in the model is not corresponding to the baseline calibration that R. Shimer (2005) has found for the US data. Many authors modified the model in order to solve this lack of volatility. First I introduce the Mortensen-Pissarides model to refer in the second part to the models parameters. Next, I present solutions found by Hall (2005) who solves the model via rigid wage setting and Hagedorn and Manovskii(2005) who provide a small surplus calibration to overcome the lack in volatility of the labor market variables. According to the so called Shimer Puzzle I will present shortly the findings of Gartner, Merkl and Rothe (2009), who calibrate the key labor market variables over the business cycle for the West-German labor market. Further I introduce Morensen and Nagypl (2007) publications on an amended version of the model and a model with endogenous separations. This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
