

Iran s Nuclear Program: Status (Paperback)

Filesize: 8.62 MB

Reviews

These types of book is the greatest ebook readily available. I was able to comprehend every little thing using this published e pdf. I realized this pdf from my dad and i encouraged this publication to discover.
(Dr. Porter Mitchell)

IRAN S NUCLEAR PROGRAM: STATUS (PAPERBACK)

To download **Iran s Nuclear Program: Status (Paperback)** eBook, remember to follow the web link below and download the file or gain access to other information which are have conjunction with IRAN S NUCLEAR PROGRAM: STATUS (PAPERBACK) ebook.

Createspace Independent Publishing Platform, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Iran s nuclear program began during the 1950s. The United States has expressed concern since the mid-1970s that Tehran might develop nuclear weapons. Iran s construction of gas centrifuge uranium enrichment facilities is currently the main source of proliferation concern. Gas centrifuges can produce both low-enriched uranium (LEU), which can be used in nuclear power reactors, and weapons-grade highly enriched uranium (HEU), which is one of the two types of fissile material used in nuclear weapons. The United States has assessed that Tehran has technological and industrial capacity to produce nuclear weapons, but has not yet mastered all of the necessary technologies for building such weapons. Whether Iran has a viable design for a nuclear weapon is unclear. Director of National Intelligence James Clapper testified before Congress in February 2016 that [w]e do not know whether Iran will eventually decide to build nuclear weapons. Obtaining fissile material is widely regarded as the most difficult task in building nuclear weapons. As of January 2014, Iran had produced an amount of LEU containing up to 5 uranium-235 which, if further enriched, could theoretically have produced enough HEU for as many as eight nuclear weapons. Iran has also produced LEU containing nearly 20 uranium-235; the total amount of this LEU would, if it had been in the form of uranium hexafluoride and further enriched, have been sufficient for a nuclear weapon. After the Joint Plan of Action, which Tehran concluded with China, France, Germany, Russia, the United Kingdom, and the United States (collectively known as the P5+1), went into effect in January 2014, Iran either converted much of its LEU containing nearly 20 uranium-235 for use as fuel in a research reactor located...
